

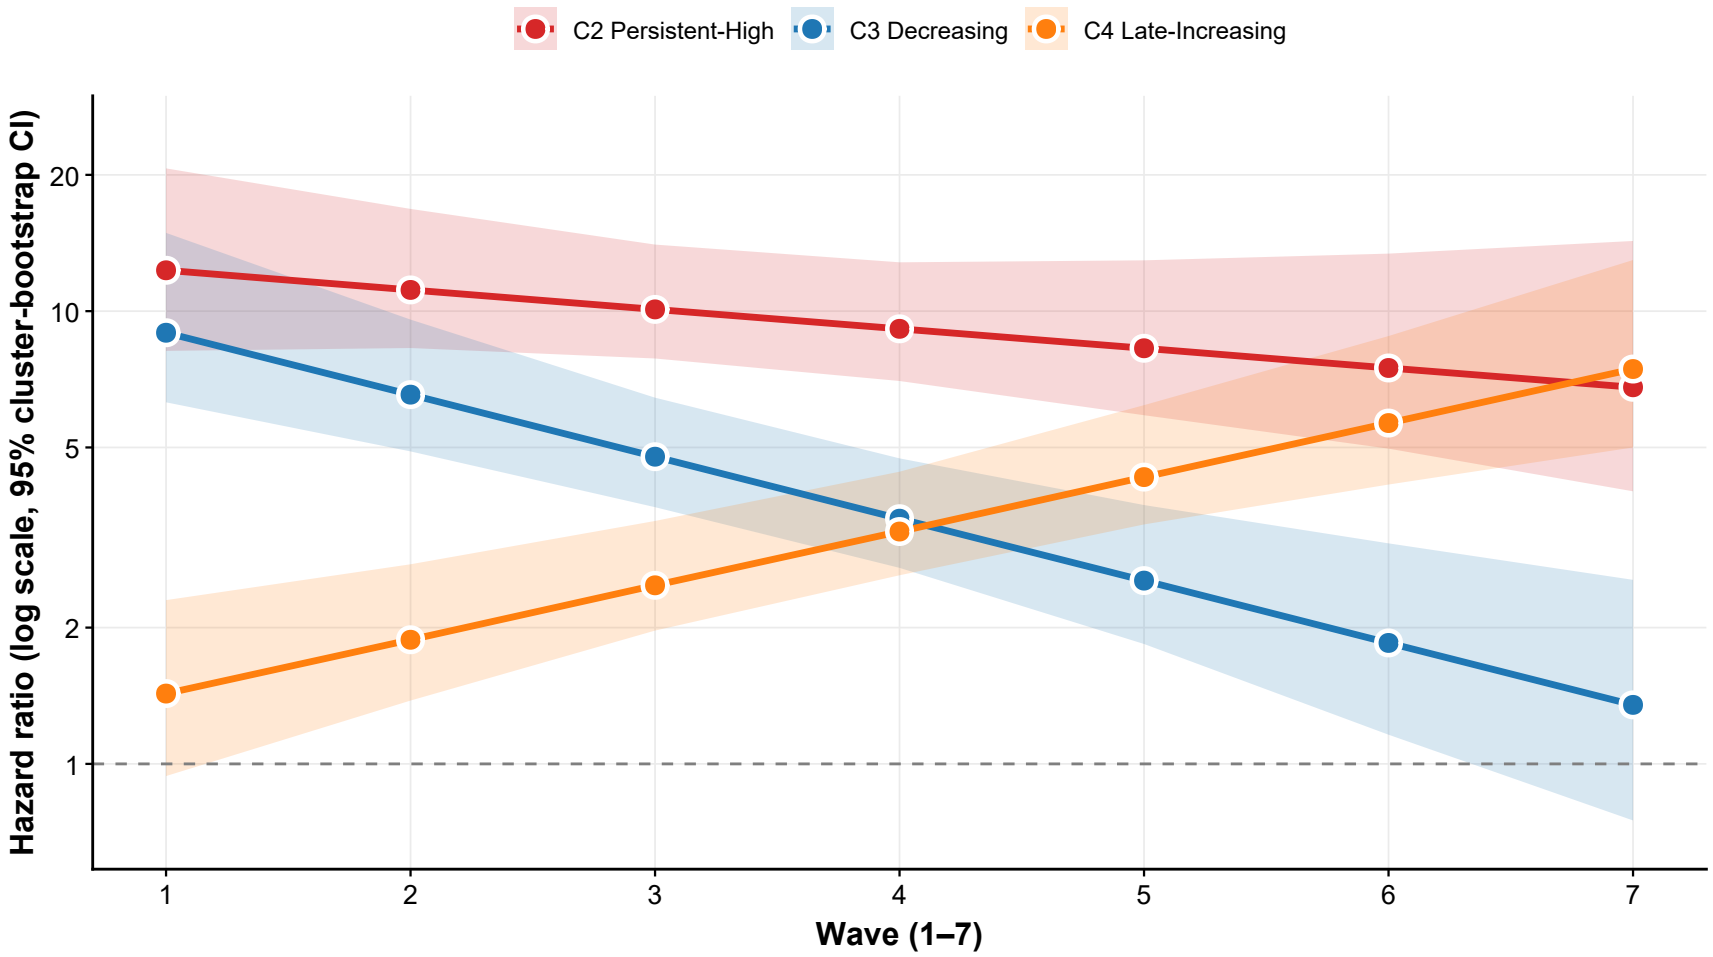

Figure 6. Time-varying class hazard ratios for first strong SI

Cox class × wave model with ID-level cluster bootstrap (B=300); reference: C1 Stable-Low

p-values floored at $1/(B+1) = 1/301 = .003$ ($B = 300$).
A planned $B = 1000$ supplementary bootstrap would lower the floor to .001.
